

BREASTFEEDING POSITION

DANGLE FEED

- **Thought this position is not very comfortable because the mother or the parent is on their hands and knees, leaning over the baby who is lying on a flat surface, the breast can more easily positioned as needed**

Photo : Annie Lachance, maman d'infinis

Note

- **Although these results have not been scientifically proven, some mothers have noticed that this position helps latching during engorgement or to clear blocked ducts**
